APPLICATIONS COMPANY PROFILE

COMPANY PROFILE

In modern manufacturing, packaging and logistics are unavoidable realities, yet when poorly engineered they quietly erode product value, operational efficiency, and long-term profitability across the entire production chain. PLUS designs integrated, data-driven systems that preserve integrity, enhance performance, and transform complexity into measurable, sustainable competitive advantage for forward-thinking industrial companies worldwide seeking control, transparency, and lifecycle optimization at every stage of their operations, from production to final shipment.

ABOUT COMPANY

PLUS delivers integrated packaging and logistics systems driven by data intelligence

There are many ways to handle and package products in industrial environments, but most processes reduce value in subtle ways. If you want to protect and enhance product performance, you need solutions that integrate data, control, and sustainability, ensuring every step from production to shipment maintains efficiency and reliability, adding measurable PLUS to every operation

GENERAL MANAGER STATEMENT

Matteo Bevini

Our mission is preserving product value through intelligent, sustainable solutions and data-driven decision-making

At PLUS, we preserve product value by delivering sustainable, data-driven, flexible solutions throughout production processes

COMPANY HISTORY

all glass

1998

All Glass is founded, establishing a solid engineering foundation in industrial automation and mechanical solutions

2003

Development of the first machines specifically designed for the Food & Beverage production and packaging industry

2009

Creation of the dedicated division serving Food & Beverage, Chemicals and Pet Food industries with tailored solutions

2025

Launch of PLUS, a new division focused on integrated packaging, handling and advanced logistics systems

PLUS is a specific operational division of All Glass, developed combining decades of expertise in packaging solutions

MISSION

Our mission is to provide sustainable, data-driven solutions that preserve product value, optimize total cost of investment, and ensure clients maintain full control, traceability, and flexibility throughout production and logistics

”

*Sustainable,
data-driven
solutions preserving
product value*

& VISION

Our vision is to be the ideal partner for designing and managing complete production plants, combining decades of packaging and logistics experience with centralized, data-driven control. By continuously investing in research and development, we provide clients with tailored, flexible, and sustainable solutions, ensuring every process is synchronized, efficient, and adaptable, while preserving product value and enhancing operational performance

”

*Partnering to
deliver integrated,
efficient,
sustainable, and
value-driven
production
solutions*

PRODUCT RANGE

DEP+
Depalletizers

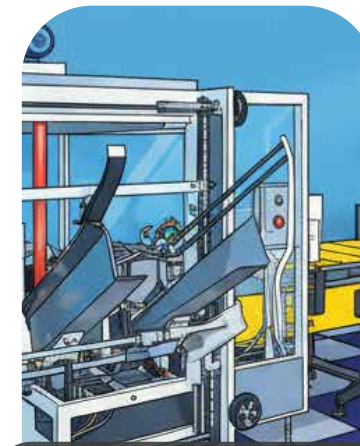

PAL+
Palletizers

ROB+
Robotic Applications

DIV+
Automatic dividers & orienters

CRD+
Cardboard equipment

PCK+
Case packers & depackers

CON+
Product conveyance systems

ACC+
Accumulation systems

PHS+
Pallet handling systems

PLUS provides a comprehensive range of equipment and integrated solutions for packaging, handling and end-of-line automation

AGV+
Automated Guided Vehicles

EOL+
End-of-line equipment

OUR SERVICES

Engineering

Custom plant design for integrated performance

Automation

Advanced automation solutions for efficient operations

Support

Installation, monitoring and continuous operational support

Integrated solutions for packaging and logistics: design, automation, installation, and support to optimize performance, protect product value, and ensure efficiency

ADDITIONAL SERVICES

Customer Support

Dedicated technical support ensuring fast response, continuous assistance, and reliable performance throughout the entire lifecycle of your systems

Process Optimization

In-depth analysis of production and logistics processes to improve efficiency, reduce costs, and maximize overall performance

Product Analysis

Comprehensive product and process analysis to identify improvements, optimize handling solutions, and protect product value across operations

*Innovation
powered by
the
experience
of All Glass*

PROJECT CASE STUDY

Real-world projects demonstrating our ability to design, integrate, and optimize packaging and logistics systems for measurable performance improvements

Real projects showcase PLUS expertise in designing, integrating, and managing packaging and logistics systems, ensuring efficiency, traceability, and enhanced product value across industries. Continuous monitoring, tailored solutions, and advanced technology support every stage of implementation, from initial concept to operational excellence, highlighting measurable improvements, minimized downtime, and optimized workflows for beverage, food, chemical, and pharmaceutical sectors

01

Project Overview

Project overviews highlight PLUS solutions, showcasing integrated packaging and logistics systems designed to optimize efficiency, protect product value, and ensure seamless operations across all production stages

02

Challenge

Challenges in packaging and logistics often involve protecting product value, reducing inefficiencies, and managing complex processes. PLUS tackles these issues with tailored solutions, advanced automation, and data-driven insights, ensuring smooth operations, minimal downtime, and measurable improvements across production and distribution

03

Project Solution

PLUS delivers smart, tailored solutions that streamline the production process, protect product value, and boost efficiency, combining automation, real-time monitoring, and full traceability to create measurable results for every client.

COMPANY HIGHLIGHTS

1

Worldwide installations in several sectors since 25+ years

2

One stop shop approach by integrated systems

3

Steel-to-equipment integrated value chain

4

Taylor - made solution based on customer's real needs

5

Machine lifecycle: 15+ years

FUTURE READY

PLUS embraces innovation and forward-thinking solutions to prepare clients for tomorrow. By combining advanced technology, sustainable practices, and data-driven insights, we enable resilient operations, smarter decisions, and lasting value, ensuring every project is future-ready and fully aligned with evolving industry challenges.

We
*innovate today to
empower our clients
tomorrow*

Our integrated approach
delivers more than efficiency,
adding measurable value and
a true operational PLUS
